ANSWERS TO QUESTIONS

- 1. After visiting the Site I – Cosa Drainage Channel (SHTS: C18 – C20) This area will be nearly impossible to install the line without doing major clearing in order to use trenching methods since the Rock is super hard and the existing hill will need to be leveled in order to provide access for spoils, gravel and Bore Pits.**

Response: Line item 81 of the bid form comprises SAWS Spec 101.1 – Preparing ROW. Line item 27 of the bid form comprises Tree Removal. The items described in this question are incidental to the work (NSPI) and/or should be covered by the Contractor's bid to price out the work accordingly.

- 2. The Proposed riprap shown on sheets C18-C19 REQUIRES Major embankment and rock trenching methods so that it can be installed properly and more clearing for access in this area. Can you please add additional items (Embankment, Clearing and concrete retaining wall)**

Response: Line item 23 of the bid form comprises COSA Spec 505.1 – Concrete Rip Rap and an associated unit of measurement and payment (SY). Between item 505.6 Payment of the Concrete Rip Rap item and SAWS Spec 101.1 the items described in this question are incidental to the work (NSPI) and/or should be covered by the Contractor's bid to price out the work accordingly.

- 3. Sheet C24 – calls for 10x10 Service lateral connection Pit (NSPI) Geotech Bore B-1 shows Very hard rock and since it will be very difficult to compact right next to the apartments can you make these bore pits require flowable fill backfill and can you add additional flowable for all these bore pits.**

Response: This item will be addressed in a future Addendum.

- 4. On sheets C21 thru C23 there is an existing Guardrail (600FT) that is damaged beyond repair and instead of being NSPI (Remove and Replace) can you add a bid item to replace. The same goes for the Remove and Replace Chain link fence (NSPI)**

Response: This item will be addressed in a future Addendum.
