

## REQUEST FOR QUALIFICATIONS

### Broadband Access Points and Programmable Logic Controllers Replacement - Phase 2 Project

Solicitation No.: PS-00044

Addendum 3 | September 19, 2017

#### QUESTIONS & ANSWERS

- 1) **Q:** Regarding local presence for EEA in San Antonio. What documentation is required to establish this. Does this office need to be documented with the PE board? What other documentation is required (e.g. needs to be on the website)?

**A:** Regarding local presence, we require the address of an actual office. We verify this in a number of ways; the address listed in the South Central Texas Regional Certification Agency's vendor profile, addresses listed on the company's website, or addresses listed on the Texas Comptroller's website: <https://mycpa.cpa.state.tx.us/coa/search.do?userType=public>.

- 2) **Q:** Can we get a list of SMWVB subcontractors the for the following scope:
- Structural Engineering
  - Geotechnical
  - Field Surveying
  - Potholing
  - Subsurface Utility Investigation
  - Radio Path Study

**A:** Please see the attached lists to this addendum.

- 3) **Q:** Will you please break down the specific skills that are needed to conduct a Radio Path Study?

**A:** A radio path study would include the following:

- Computer-based path studies to determine signal strength from repeater sites to remote sites
- Physical path studies to verify acceptable signal strength and pass simulated data packets from repeater sites to remote sites

- Tests would be performed in the field at SAWS sites.
  - Tests would require a bucket truck or lift to reach heights of approximately 60-feet.
  - Tests would require a certified tank climber(s) for water production tanks of up to approximately 200-feet in height.
  - Photographs of the path line-of-sight for each site.
  - Path studies will address and correct any issues, including, but not limited to, instances where signal strength is inadequate for the proper operation of transmitting data across the radio system
  - Path studies will include investigation of redundant/alternate paths for each repeater site
  - Results of path studies [both computer-based and physical (field verified)] will be included in a Technical Memorandum
- 4) **Q:** Any chance there are any other firms classified under RF Communication? This might be a good descriptor of what we're looking for.

**A:** There were very few SMWVB firms in Texas that fell under any of those descriptors, and System Controls and Instrumentation was the only firm in the San Antonio area that is SMWVB-certified.

**END OF QUESTIONS & ANSWERS**

No other items, dates, or deadlines for this RFQ are changed.

**END ADDENDUM 3**
