

## Brooks Recycled Water Pump Station Upgrades Project

The Brooks Pump Station is part of the SAWS recycled water system and is located on a SAWS facility near 3302 SE Military Drive, San Antonio, TX 78223. This station serves recycled water customers on the southeast part of Bexar County.

The Brooks Pump Station does not meet the recycle water demands of its existing and future customer base within its distribution network and causes the Riverside Golf Course Pump Station to operate inefficiently. The project seeks to make improvements to the prevent premature equipment wear and tear and reduce maintenance costs at Brooks and Riverside Pump Stations.

The project scope includes evaluation and replacement of four (4) high service pumps, complete replacement of electrical and communication equipment, instrumentation and controls equipment, yard piping, construction of a canopy protective structure for the electrical and mechanical equipment. Civil site improvements, such as security fencing, site lighting and pavement are also included.

### When Will Work Occur?

Estimated construction duration is 14 months.

### What to Expect

- ✓ Construction is anticipated inside the SAWS Facility.
